COMPOSER

# Accelerate Time to Value for SAP® Process Improvement

Winshuttle Composer simplifies workflow solution creation by providing a single authoring environment for automating SAP-centric processes. Composer combines deep SAP integration with rapid development and deployment capabilities for a forms and workflow package that gives non-developers the power to build solutions that accelerate and optimize business operations.

Business User Application Development for SAP Workflow

Composer is a server-based application accessible through a web browser, providing a flexible authoring environment for building applications. Composer helps enterprises accelerate their time to value for SAP process improvement by delivering the latest in SAP process acceleration and innovation, including:

- **Responsive Display:** Any form built with Composer can be rendered on multiple devices including smartphones, tablets and desktops, without requiring modification.

- **Cross-Browser Support:** Composer forms can be authored and rendered in all modern web browsers, including Internet Explorer, Safari, Chrome, Opera and Firefox.

- **Single Authoring Environment:** Authors use a single, integrated design environment to create the entire solution, including UI, workflow, validation rules, and data connectivity.

Key features

- Responsive Display
- Cross-Browser Support
- Single Authoring Environment
- Multi-language authoring support for English, French, German, Italian and Spanish

Key benefits

- Shorter development times
- Fewer testing cycles
- Quicker time to value

"Winshuttle Composer simplifies our workflow solution creation by providing a single authoring environment to build SAP-centric process applications."

⬡ COMPOSER

Composer's integrated design environment and one-click deployment model mean:

- Shorter development times
- Fewer testing cycles
- Quicker time to value

Business users can easily automate business processes that include forms, such as maintenance requests, purchase requests, expense reimbursement requests and internal requisitions. With Composer, it is straightforward to model workflows routing the forms to different participants for additional data input and approval. Different views of the same form can be displayed for different roles, providing each user with a targeted and relevant user interface.

The following features make Winshuttle Composer unique:

Form Design
- Any form built with Composer is an HTML5 form that can be rendered on multiple devices including smartphones, tablets and desktops, without requiring modification
- Easy lookup and update of data from various data sources including SAP
- Authors use a single, integrated design environment to create the entire solution, including UI, workflow, validation rules, and data connectivity
- Many different guided wizards inside the product, making the solution development easier

Workflow Design
- Drag-and-drop controls to create interactive forms and workflows
- Easy-to-use swim lane-based graphical workflow design
- Advanced management of workflow processes with robust monitoring, auditing, and versioning of workflows
