[go2vanguard.com](http://go2vanguard.com)

Vanguard Integrity Professionals has solved complex cybersecurity problems and provided cost-effective regulatory compliance solutions for the world's largest enterprises since 1986. Vanguard focuses on security, and validating the security and compliance of controls, for mission-critical data and applications. The leading financial, healthcare and retail organizations, as well as government agencies, in the U.S. and around the world, rely on Vanguard.

Vanguard was the first to provide automated security software and is noted as the pioneer in the industry by Gartner. We continue to provide the industry's most powerful, complete suite of software applications designed to dramatically reduce data security vulnerabilities and the burden of audit and compliance reporting.

Vanguard continuously drives innovation in security software and technology to stay ahead of evolving regulatory requirements and an ever-changing threatscape. Led by some of the most knowledgeable minds in the industry, our Vanguard Research Institute team develops a new security software application every 18 to 24 months, and more than 100 new product features and enhancements are incorporated into existing solutions every year.

The Vanguard enterprise security and compliance solutions are an integrated and interoperable family of software solutions specifically designed to meet today's unprecedented security threats and strict regulatory compliance requirements.

## Securing the Cloud

Many of the world's largest organizations and governments have deployed Vanguard security software to protect the critical data and applications that users access over the Internet.

To minimize risk, enterprises moving to cloud computing must ensure that their systems are secure and centrally managed. Only authorized and authenticated users should be allowed to access sensitive cloud-based data and applications. Securing the cloud is complex but no more difficult than many of the security challenges that Vanguard has been solving for customers since 1986.

Wherever your cloud computing environments are hosted, whether in private or on public cloud providers, Vanguard can extend the power of your security server to provide proven identity and access management to these "new" cloud environments.

Vanguard educates hundreds of security and compliance professionals every year.

Vanguard's professional services team provides their expertise for sophisticated and robust security implementations around the world.

Vanguard's proven automated security and compliance tools are deployed throughout the Fortune 1000 and in government agencies worldwide.

## Ask about Vanguard's IAM Solutions for:

- **Enterprise Identity and Authentication**
  - **Multi-factor Authentication**
    - **Operational Security**

Vanguard provides software, services and training to enable enterprises to automate operational security processes and ensure that security configuration controls are in place, with real time alerts of anomalous activities within your network.

## Ask about Vanguard's GRC Solutions for:

- **Continuous Monitoring**
  - **PCI DSS Compliance**
    - **SOX Compliance**
      - **GLB Compliance**
        - **FFIEC Compliance**
          - **SEC Compliance**
  - **HIPAA Compliance**
    - **Data Privacy Compliance**
      - **Intrusion Detection/Intrusion Prevention**
        - **FISMA Compliance**

Vanguard GRC solutions automatically satisfy the regulatory and compliance requirements of internal auditors, government agencies and other private mandates on security and compliance reporting.
