

WinShuttle 11

Mika Keskinen

Background

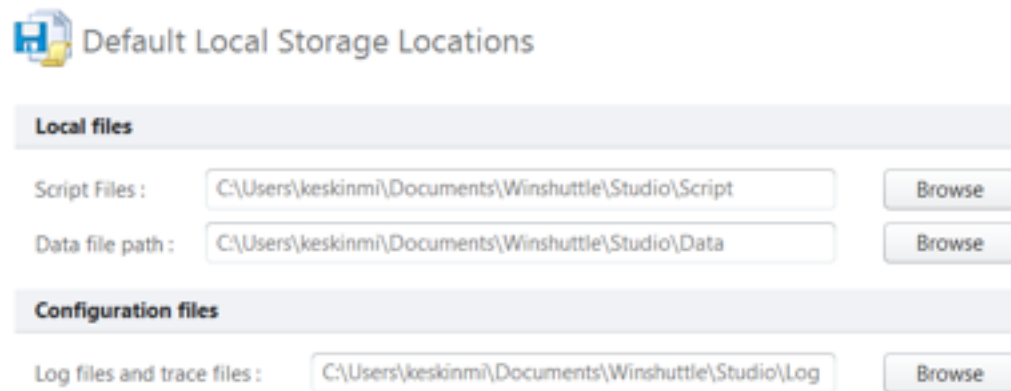

- Mika is working as logistical masterdata specialist
 - Responsible of WM and distribution data for all Onninen countries
 - Finland, Sweden, Norway, Baltics, Poland and Russia
 - Provides Winshuttle scripts for logistics
 - Storage bins, Material master, ztables, Route schedules
- Onninen is currently using runner/transaction 10.5
 - 4 transaction and 30 runner licenses

Logistics data maintenance

- No Function module installed for 11.0
- Testing was done mostly to test environment and sandbox
- Most used transactions when testing LS01n, LS02n, MM02 (WM sheets), SM30 (ztables)

11.0 cons

- WinShuttle 11.0 was installed by support person
 - Even logged in as windows user, default directories was set to installers credentials home folder instead of windows users.
 - Can be changed in settings, but feature that should be fixed.

11.0 pros

- Upload speed to data was similar with 10.5
- Using IF statements was much easier than on 10.x
 - Possible to do more complex conditions easily
- Saving script/excel file can be done with one button
- On this scale of users and scripts Onninen is using, we will not go directly from 10.x to 11.
 - Test results from 11.0 was positive and we will start using 11.0 eventually.
 - Most likely we will start using 11.0 on certain processes first, and rollout to all users when all recordings and scripts per area are tested.

11.0 cons

- When creating recordings "Discard Recording" button was grayed several times, so i couldn't cancel recording.
- Logging in when creating new recording was slower than with 10.5
