

Hadassah Medical Center Reaches New Levels of SAP® Optimization & Control

Hadassah Medical Center

Customer

Hadassah Medical Center

Industry

World-class medical institution

Product

ProfileTailor™ Dynamics

BACKGROUND

A pioneer in adopting innovative technologies, Hadassah Medical Center began implementing SAP® over a decade ago, addressing extended functionalities such as logistics, financial, HCM and more. By 2010, Hadassah Medical Center required a reliable monitoring and management solution that would assist in controlling SAP activities, as well as handle authorizations within the company – specifically HR/HCM module users.

After assessing other options Hadassah Medical Center chose Xpandion’s ProfileTailor™ Dynamics solution, particularly for its short implementation process and high performance level, enabling the organization to best achieve its defined goals. In 2011, with the objective of narrowing authorizations and reducing fraud, Hadassah Medical Center turned to Xpandion once again asking to extend the installation of ProfileTailor Dynamics to include effective analysis of data gathered in the system.

RESULTS

ProfileTailor Dynamics was implemented successfully at Hadassah Medical Center, delivering detailed reports and accurate results within just three weeks. The organization was able to easily obtain a clear view, in real-time, of all employee activities, as well as effectively manage the allocation of SAP authorizations. The short implementation process saved Hadassah Medical Center 18% in maintenance costs alongside months of tedious manual work.

About Hadassah Medical Center

Hadassah Medical Center is a premier facility of healing, teaching, and research in Jerusalem. For nearly 100 years, Hadassah and its hospitals

have been leaders in medicine and nursing in Israel, laying the foundations and setting the standards for the modern health care system. The majority of medical breakthroughs in Israel have taken place at Hadassah.

The first successful heart transplant was performed at Hadassah - as was the first robotic surgery and the world’s First Computer-Assisted Hip Replacement Surgery. In the 21st century, Hadassah has become known for instituting and implementing “The Medicine of Tomorrow” incorporating advanced solutions into “tailor-made” treatment.

Requirements

- Optimize authorization usage
- Reduce business risk and fraud
- Lower SAP maintenance expenses
- Gain real-time insight of SAP activities

Solution

Xpandion’s ProfileTailor Dynamics

Achievements

- Smooth and rapid implementation, saving in maintenance expenses
- Ongoing monitoring of SAP activity for complete control
- Narrowing authorizations based on actual need and usage, reducing fraud and enhancing security
- Monitoring sensitive activities and answering auditors’ requirements

Following the expansion of ProfileTailor Dynamics in 2011, Hadassah Medical Center was able to effectively eliminate SAP_ALL users, in addition to closing inactive accounts – significantly reducing authorizations in the organization as demanded. Furthermore, the product's ongoing monitoring and automated processes facilitated the inspection of sensitive and high-risk activities, reducing fraud and enhancing security across the organization.

Narrowing authorizations by ProfileTailor Dynamics is based on behavioral profiling analysis, guaranteeing optimized authorization-consumption that accurately reflects real SAP needs and usage.

BENEFITS

- ProfileTailor Dynamics is installed externally to SAP and requires no changes to the SAP system
- Continuous monitoring in real time of all SAP users and activities enhances security and control
- User behavior-based profiling achieves optimized authorization usage
- Clear reports for easy and efficient management of the system

About Xpandion

Xpandion is the leading provider of ERP usage inspection solutions, delivering unprecedented real-time visibility into management systems, significantly improving security, optimizing licensing usage and enabling GRC/SOX compliance. Available in cloud or on-premises, Xpandion's ProfileTailor™ Dynamics suite is implemented rapidly and does not require any changes to monitored systems.

SAP® is a registered trademark of SAP AG in Germany and in several other countries.

“ProfileTailor significantly increased the hospital’s security level by eliminating SAP_ALL authorizations, narrowing authorizations according to actual usage, and removing inactive users. We now have real-time insight into the actual SAP-related activity being performed by our employees.”

The implementation took only 3 weeks, and has reduced the risk of fraud and breach of privacy, months of manual work were avoided, and 18% has been saved on maintenance costs. We are very pleased with the results and highly recommend Xpandion’s solution.”
